

Open Practical lesson

At present, the assistant of the department "Irrigation and Amelioration" of the institute Hayitova Mahbuba Safarovna passed the open lesson on the theme "The composition of salts in soil and their degradability of plants" for the 3rd course 313 group. The open lesson was attended by the scientific researcher at the Scientific Research Institute of Hydrometeorology Gafurov A.A., and the teachers of the Department of Irrigation and Melioration. At the beginning of the workshop, the teacher began to teach students the concept of salt content in the soil. She also explained the reasons for soil salinization and gave each student specific assignments. At the end of the lesson, the teacher evaluated each student according to their active participation. The practical lesson was interesting and interesting in the form of questions and answers between students and teachers.
