
Clubs

A circle "Young ecologist" conducts its activities at the department. The activities of the circle are aimed at strengthening environmental knowledge among students and undergraduates, expanding their outlook on nature conservation, rational use of natural resources, fostering an active life position in them in matters of environmental protection, attracting gifted students to scientific activities. The head of the "Young ecologist" circle is professor of the department Bakhodir Ismailhodjaev. More than 20 gifted students are engaged in the circle. Under the leadership of the faculty of the department, they published more than 40 scientific articles and abstracts, and also participated with reports at various conferences at the level of higher educational institutions. Participants of the student circle are actively involved in the scientific research of the department.
